

A GREAT PLACE TO SWIM, BUT WILL SOUND QUALITY TAKE A DIVE?

The venue The challenge The solution The result

Farum Sv2mmehal is not merely one swimming pool. It is a complex of three pools, the largest being an Olympid&ize 50m pool used both for leisure and for national and international swimming competitions.

For fun use, the basin floor can be raised and the pool split into three smaller pools. There is a special pool for small children, only 45cm deep,

while the bold can try the 5m board, the slide or the climbing wall suspended over the water. Serious swimmers can train in separate 25m pool, then relax in a smaller hot basin at 372C.

With these different areas and activities, and the many hard surfaces, background noise is substantial and reverberation time is high.

When BOSE® Professional Systems Division and its locally@based

Pro Partner were asked to design and install a high quality, multi②

purpose, easy@o@ise sound system for the Sv@mmehal, they knew they faced a tough challenge.

2

FOUR AUDIO ZONES, ONE FLEXIBLE SOUND SYSTEM

The challenge The solution The result The venue

The Sv2mmehal3 management required a sound system that could be used independently in each area of the facility, yet can also function as a single integrated unit. In addition, the system must be logical and intuitive in its operation, so that it can be used easily by people from different swimming teams.

The Bose solution for the main swimming hall is based on PANARAY 402

Series II and 32SE environmental speakers, together with a four

Tone paging system with local input modules. The slim 402° full ange speakers provide high quality music and clear speech with broad horizontal dispersion, while the smaller 32SE near dield speakers ensure speech intelligibility within discrete zones.

Meanwhile, in the other three pools, BOSE® 802®

Series III Articulated Array full ange speakers deliver clear, natural sound over a wide listening area.

A live demonstration was arranged by the local Bose team, with 402" speakers temporarily set up in the main pool and 802"s in the smaller pools. This enabled the management, along with the lifeguards and representatives of swimming clubs and other pool users,

to hear the core of the proposed system in action. The demo was so convincing, the formal goahead was given to install the new system.

The venue The challenge The solution

While the live demo was impressive, the installed system delivers substantially higher performance still. The decision to use a combination of BOSE[®] 402[®] speakers and smaller 32SE speakers in the main swimming pool has been fully justified, and the BOSE[®] 802[®] speakers are proving an equally successful choice for the smaller pools.

All the loudspeakers are engineered to withstand the rigours of constant use in the humid poolside environment. Completing the system is the user riendly paging facility with its local inputs, enabling the Sv mehal staff to make announcements throughout the building.

Farum Sv2mmehal3 manager, Jacob Hermansen, appreciates the way the sound system covers a wide range of applications: 2Now we can

use the BOSE[®] system when we have sports events, and no longer have to hire a special sound system when the pool is used for a national or international event. He adds: We are also very proud to have Team Danmark, the national swimming team, use our facilities and benefit from our sound system.
